

ENERGY FIT HOMESSM

Real savings. Lasting comfort.

WHY BUY AN ENERGY FIT HOME?

Energy Fit Homes is a certificate program designed exclusively for existing homes that focuses on energy efficient upgrades. Buying a certified home provides assurance that the home has reached energy efficiency standards.

BENEFITS

- **Cost-savings** – For the average home built before 1980, an Energy Fit Home will save \$250 to \$400 per year on utility bills compared to a non-certified home.¹
- **Comfort** - Energy upgrades can deliver improved comfort everyone in the family can enjoy.
- **Third party verification** – With Energy Fit Homes you know that the energy efficiency of the home has been verified by energy experts.
- **Greater flexibility in updates** – A certified home already meets energy efficiency standards so you can focus on upgrades that make the house your own.
- **Peace of mind** – Our standards ensure that upgrades are completed to meet health and safety standards.
- **Environmental protection** – Certified homes consume less energy and generate less air pollution and greenhouse gases.

REQUIREMENTS

What exactly does having a certified house mean? Energy Fit Homes evaluates the performance and efficiency of the following areas of your home to assure that it meets certificate standards:

**Heating system • Insulation and air sealing
Windows • Lighting • Ventilation and combustion safety**
