Appendix H: Small Commercial Market Sector Study

Overview

The full report that this appendix supports, *Minnesota Energy Efficiency Potential Study: 2020-2029*, is available for download on the [project website](#).

Minnesota has a thirty-plus year history of leadership in energy efficiency policy and achievements. In order to continue to maximize the benefits of cost-effective energy efficiency resource acquisition by utilities, the project team, consisting of Center for Energy and Environment (CEE), Optimal Energy (Optimal) and Seventhwave, was commissioned to:

- Estimate statewide electric and natural gas energy efficiency and carbon-saving potential for 2020-2029;
- Produce data-driven and stakeholder-informed resources defining market segments, end uses, measures, and programs that could be targeted in the decade ahead to realize the state’s cost-effective energy efficiency potential; and
- Engage stakeholders in order to help advance robust energy policies and energy efficiency programs in the state, and to inform future efficiency portfolio goals.

This appendix focuses on the small commercial sector, considered an underserved market because the sector is historically difficult to reach due to its dispersed nature and other market barriers. Some Minnesota utilities have energy efficiency programs that specifically target the small commercial sector, although most are driven by lighting-only retrofits. However, many utilities, especially gas utilities, do not have programs that target small businesses. As federal lamp standards become more stringent and market penetration of efficient products grows, lighting-only programs will have increasing difficulty achieving savings goals. It is with this backdrop that this potential study addresses the opportunities for small commercial businesses.

For purposes of this potential study, the project team separated small offices and small retail from their larger counterparts when developing the model. The project team also assumed that food service building segment can be categorized as small commercial since the majority of all food service establishments are less than 50,000 SF.

**Characteristics of small commercial sector in Minnesota**

According to the U.S. Census Bureau’s 2013 County Business Patterns (CBP), there are roughly 138,000 small businesses in Minnesota, accounting for 94 percent of all businesses in the state and employing over one million people. The majority of small businesses in Minnesota employ fewer than five people and only one-tenth employ 20 or more (see Figure 1).
A recently completed CARD-supported study took a closer look at the small commercial sector to understand energy efficiency opportunities and savings. Through a telephone survey of over 1,400 businesses and 100 onsite visits, the study examined the major end uses for four business types: retail, offices, food service, and groceries/convenience stores.

The study found that Minnesota small commercial businesses tended to occupy spaces that were smaller than 5,000 square feet and located in a one-story building (Table 1). There are very few buildings overall that occupied spaces larger than 50,000 square feet.

</tbody>
</table>

The study also found a variety of ownership structures within the business segments (Table 2). For retail, food service and office business segments, it was more likely that they lease or rent their businesses space. Additionally, these building types are more likely to be located in multi-tenant or mall structures. Offices that are not in free-standing structures are more likely to be found in multi-tenant structures rather than malls.
### Table 2: Ownership structure and building type

Results from the Potential Study

The results from the potential study modeling suggests that programs targeting these three business segments in the small commercial sector have the potential to achieve cost-effective first-year savings of 2.6% percent annual electric utility sales for small commercial businesses (Table 3) and 2.6% percent of natural gas sales (Table 4). This represents 31 percent of the total achievable electricity savings potential in the commercial sector and 39 percent of the total commercial potential for natural gas.

*Mean of first-year savings potential for 2020-2029

In terms of energy end-use, each business segment shows electric potential in a variety of end uses (Figure 2). For all three segments, undifferentiated electrical measures, such as integrated building design that affects multiple end uses, offer significant potential. In small offices and small retail, interior lighting measures and ventilation measures are dominant. And for food service, refrigeration comprises the most potential for electrical savings.

For natural gas measures, space heating dominates the potential in the retail and office segments. Additionally, undifferentiated measures also show significant potential. In food service, the potential savings are more evenly split between space heating, ventilation, cooking and measures that affect multiple end uses.
Error! Reference source not found. shows the top ten measures for each business segment in order of their relative potential impact. Measures categorized as “other” include ECM circulators, water pumps, dishwashers and custom measures.
Figure 2: Distribution of cumulative total achievable program potential for 2020-2029, by fuel and small commercial business segment

*Measures that affect multiple end uses
Figure 3: Top measures in terms of cumulative total achievable program potential for 2020-2029, by fuel and small commercial business type.

**Electricity**

- Small office:
  - Integrated bldg design (13.6%)
  - VSD, HVAC Fan (10.2%)
  - ECM Fan Motors (8.2%)
  - Improved Lgt Design (7.4%)
  - Int Ltg Controls (7.4%)
  - VSD_Custom, Other (6.8%)
  - Deep Energy Retrofit (5.4%)
  - Com LED Tube Replacement Lamps (5.0%)
  - Demand Control Ventilation (3.4%)
  - LED Troffer Retrofit Kits (3.2%)

- Small retail:
  - Integrated bldg design (11.0%)
  - Improved Lgt Design (10.6%)
  - Int Ltg Controls (9.8%)
  - VSD_Custom, Other (7.4%)
  - Com LED Tube Replacement Lamps (5.2%)
  - VSD, HVAC Fan (5.1%)
  - ES Refrigerator and Freezer (4.4%)
  - Deep Energy Retrofit (4.3%)
  - ECM Fan Motors (4.1%)
  - Exterior Canopy/Soffit LED (4.0%)

**Natural Gas**

- Small office:
  - Condensing Furnaces (37.0%)
  - Smart Thermostat, G (17.0%)
  - Energy Recovery Ventilator (12.1%)
  - Demand Control Ventilation (11.8%)
  - Integrated bldg design (5.3%)
  - Boiler Upgr/RepI (5.0%)
  - Optimized unitary HVAC dist/control sys (2.9%)
  - Deep Energy Retrofit (2.6%)
  - Retrofit duct sealing (1.7%)
  - Programmable Thermostats, G

- Small retail:
  - Condensing Furnaces (41.0%)
  - Smart Thermostat, G (17.0%)
  - Energy Recovery Ventilator (15.9%)
  - Demand Control Ventilation (6.1%)
  - Integrated bldg design (5.5%)
  - Deep Energy Retrofit (2.9%)
  - Retrofit duct sealing (2.8%)
  - Boiler Upgr/RepI (2.1%)
  - Programmable Thermostats, G (1.7%)
  - Optimized unitary HVAC dist/control sys (1.5%)

**Food service**

- Food service:
  - HE Small Walk-In (18.5%)
  - Integrated bldg design (8.6%)
  - Evaporator Fan Speed Controls (8.3%)
  - High-eff built-up refrigeration (8.2%)
  - Evaporator Fan Motor Retrofit (7.1%)
  - ECM Compl/Cond Fan Motors (6.5%)
  - ES Electric Hot Food Holding Cabinet (3.5%)
  - Deep Energy Retrofit (3.5%)
  - Kitchen DCV (3.1%)
  - VSD, HVAC Fan (3.0%)
  - ES Gas Steamer (27.1%)
  - Smart Thermostat, G (8.9%)
  - Energy Recovery Ventilator (8.3%)
  - Integrated bldg design (7.4%)
  - High-eff built-up refrigeration (5.4%)
  - Deep Energy Retrofit (3.9%)
  - Gas Oven, Broiler, Pasta Cooker (3.7%)
  - Com ES Dishwasher (3.4%)
  - Condensing RTUs (3.3%)
Program opportunities

The small commercial sector presents unique challenges to utility program administrators. Business owners or managers often can devote little extra time to thinking about energy because of competing demands. They are cost-conscious which means they would like to save money on energy costs but may not have access to the capital funds to do anything about it. Moreover, they need to have confidence that any investment they make has a positive impact on their customers and bottom line. Based on these challenges, the recent small commercial characterization identified customer-focused program approaches that can be used by program administrators to help overcome barriers to participation. They are summarized in Table 5.

---

## Table 5: Recommended implementation strategies and the challenges they address

<table>
<thead>
<tr>
<th>Implementation approach</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vertically integrated program</td>
<td>Addresses varied and holistic nature of the measures. A vertically integrated program allows the program administrator to be nimble and flexible in finding the appropriate trade allies from a variety of trades, and it can streamline the process for a business from identifying energy efficiency opportunities to moving through a program.</td>
</tr>
<tr>
<td>Needs-based marketing and outreach</td>
<td>Engages customers because the program targets issues that matter most. Customers can be heavily segmented, with customer needs identified by not only segment (e.g. occupant comfort for restaurants, profit margin for grocery) but also by specific end uses (e.g. those customers with high plug loads). Follow-up allows for multiple points of entry into the program to address the ebbs and flows of the business cycle.</td>
</tr>
<tr>
<td>Ally with trusted information channels (e.g. business associations)</td>
<td>Provides marketing through trusted networks such as business organizations or local chambers of commerce. A successful program engages with customers on many levels. Programs need to be nimble enough to help customers that may speak a different language or have different values and approaches to business.</td>
</tr>
<tr>
<td>Easy financing options</td>
<td>Provide alternatives to high capital expenditures. Even when a small business is doing well, cash flow is still often a concern.</td>
</tr>
<tr>
<td>Selling non-energy benefits (e.g. productivity, comfort)</td>
<td>More motivation beyond simply saving money. Communicate benefits of comfort, convenience and improvements in business process.</td>
</tr>
<tr>
<td>Customer journey to deeper savings</td>
<td>Allows for the flexibility that is needed for small businesses. Have a planned and straightforward process for a customer to move from low-cost direct-install measures to more capital-intensive project.</td>
</tr>
<tr>
<td>Using residential marketing channels</td>
<td>Improved outreach connection to busy small business owners. Many small businesses may be more aware of their utility’s residential offerings.</td>
</tr>
